

SARA™

Speaking Autonomous Responsive Agent

REPORTING FOR DUTY

Always active. Instantly responsive. Built to scale.

SARA is the Agentic AI redefining modern security operations.

Too Many Alerts

Security teams aren't struggling with a lack of data.

They're buried in it.

Even with enterprise VMS platforms and edge analytics, the pressure to respond faster and reduce risk keeps rising. The real challenge isn't detection. It's what happens next.

Most GSOCs still handle alerts sequentially, one at a time which slows response and leaves gaps in coverage and documentation.

SARA is a new kind of operator.

She's an always-on agentic AI that verifies and engages threats in real time, while alerting your team.

SARA integrates with the systems you already use: ONVIF Profile-S cameras, Milestone™, Genetec™, RADSOC, and RAD's own AI devices.

She doesn't just analyze data. She acts on it.

Built for Response

SARA handles incidents in parallel, verifying, engaging, escalating, and acting in real time.

She doesn't wait for human input. Once a threat is confirmed, she acts instantly: issuing live talk-downs, executing your SOP, and documenting every step automatically in RADSOC, RAD's cloud-based incident management platform.

She can notify up to three stakeholders simultaneously through calls, texts, and emails, all triggered by your escalation protocols.

For security leaders, this means faster intervention, tighter coordination, and clearer post-incident reports without changing how your team works today.

Every incident is recorded, documented, and preserved automatically, creating a complete record of what happened and how it was resolved.

No queue. No delay. No missed steps.

From Detection to Resolution

Agentic AI operator, replacing live operators with multi-threaded, real-time response, calling, and escalation.

Seriously Powerful

Time-Stamped Incident Timelines

Every action is logged in sequence, from initial detection through resolution, without operator intervention.

Forensic-Grade Documentation

SARA generates complete incident records designed for investigations, audits, and compliance reporting.

Chain-of-Custody Evidence Handling

Video, audio, transcripts, and system actions are preserved with integrity and traceability.

Narrative Incident Summaries

Plain-language explanations document what happened, why actions were taken, and how the incident was resolved.

Evidence Packages On Demand

Export-ready files support legal review, insurance claims, and post-incident analysis.

Generated During The Incident

Documentation is created in real time, not reconstructed after the fact.

Audit-Ready By Default

Incident records are structured to support compliance, internal review, and external investigations.

The result is faster resolution, tighter coordination, and a defensible incident timeline that collapses the security incident window, without adding operational burden.

Next, see how SARA runs across RAD's ecosystem of devices, extending this same level of response and incident clarity to any site.

SARA Agentic AI Security Incident Response Orchestration

Detection

Immediate threat detection, through AI-driven analytics.

Verification

SARA Agentic AI verifies alerts in real-time.

Deterrence

Autonomous audio and visual pushback to deter intruders.

Escalation

SARA Agentic AI escalates incidents to responders.

Response

Responders receive scene updates and direction.

Resolution

Incident reports are generated instantly.

Edge in Action

Every RAD device includes Edge, enabling real-time talk-downs and on-device deterrence using built-in audio and visual tools.

Once SARA Agent is licensed, Edge becomes active. This allows her to take control of any RAD unit to engage suspects, escalate alerts, and log the full response in RADSOC.

With no integration required, every RAD device is ready for real-time response the moment SARA Agent is deployed.

Your Devices, Upgraded

SARA Agent brings intelligent response to every form factor in the RAD lineup, from fixed units to mobile trailers and autonomous patrols.

With SARA Agent and Edge working together, every RAD device becomes an intelligent first responder.

SARA replaces the manual alert queue with real-time action, verifying threats, engaging through voice-downs, and escalating alerts as they happen. Every step is logged automatically in RADSOC, so your team sees the full picture without delay or manual effort.

This isn't a dashboard or analytics tool. It's autonomous action built into your security infrastructure, replacing the delay of traditional monitoring.

Experience SARA

See how Agentic AI verifies threats, takes action, and delivers results in one seamless response.
