" Enabling Real-Time Security.

Too Many Alerts

Security teams aren't struggling with a lack of data.

They're buried in it.

Even with enterprise VMS platforms and edge analytics, the pressure to respond faster and reduce risk keeps rising. The real challenge isn't detection. It's what happens next.

Most GSOCs still handle alerts sequentially, one at a time which slows response and leaves gaps in coverage and documentation.

SARA is a new kind of operator.

She's an always-on agentic AI that verifies and engages threats in real time, while alerting your team.

SARA integrates with the systems you already use: ONVIF Profile-S cameras, Milestone™, Genetec™, RADSOC, and RAD's own AI devices.

She doesn't just analyze data. She acts on it.

Built for Response

SARA handles incidents in parallel, verifying, engaging, escalating, and acting in real time.

She doesn't wait for human input. Once a threat is confirmed, she acts instantly: issuing live talk-downs, executing your SOP, and documenting every step automatically in RADSOC, RAD's cloud-based incident management platform.

She can notify up to three stakeholders simultaneously through calls, texts, and emails, all triggered by your escalation protocols.

For security leaders, this means faster intervention, tighter coordination, and clearer post-incident reports without changing how your team works today.

No queue. No delay. No missed steps.

From Detection to Action, Instantly

Agentic AI operator, replacing live operators with multi-threaded, real-time response, calling, and escalation.

◉ **Detect**
SARA receives signals from RAD devices or ONVIF Profile-S compatible cameras. AI-based analytics identify movement, behavioral anomalies, or predefined triggers.

◉ **Verify**
Unlike traditional alert systems, SARA verifies the event in real time. She analyzes live video and threat patterns to confirm a true incident before taking action.

◉ **Engage**
If the situation requires intervention, SARA issues real-time voice-down commands through RAD devices. She can also activate strobes, sirens, or pre-scripted deterrence.

◉ **Notify**
SARA contacts multiple stakeholders at once. Phone calls, text messages, and emails go out instantly, all coordinated by SOP and role-based escalation rules.

◉ **Report**
As soon as the event concludes, SARA generates a complete report. Video, audio, transcripts, and actions taken are documented and accessible inside RADSOC.

Next, see how SARA runs on RAD's ecosystem of devices, delivering instant response and full incident clarity to any site.

“ Smarter Response Starts Here.

Every Device

SARA runs natively on RAD devices, from portable units to full-scale autonomous patrols.

When a threat is detected, she takes over, issuing commands, escalating alerts, and documenting the entire event in real time.

Every action is visible in RADSOC, where reports are generated automatically and teams stay in sync.

This isn't just smarter software. It's real-time security, the kind that acts in the moment, not after it.

Edge in Action

Every RAD device includes Edge, enabling real-time talk-downs and on-device deterrence using built-in audio and visual tools.

Once SARA Agent is licensed, Edge becomes active. This allows her to take control of any RAD unit to engage suspects, escalate alerts, and log the full response in RADSOC.

With no integration required, every RAD device is ready for real-time response the moment SARA Agent is deployed.

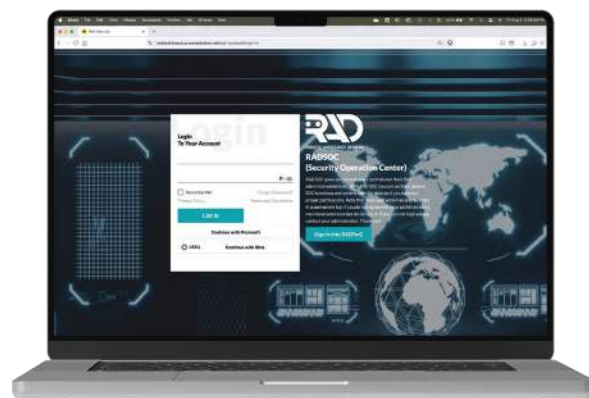

Your Devices, Upgraded

SARA Agent brings intelligent response to every form factor in the RAD lineup, from fixed units to mobile trailers and autonomous patrols.

With SARA Agent and Edge working together, every RAD device becomes an intelligent first responder.

SARA replaces the manual alert queue with real-time action, verifying threats, engaging through voice-downs, and escalating alerts as they happen. Every step is logged automatically in RADSOC, so your team sees the full picture without delay or manual effort.

This isn't a dashboard or analytics tool. It's autonomous action built into your security infrastructure, replacing the delay of traditional monitoring.

Experience SARA

See how Agentic AI verifies threats, takes action, and delivers results in one seamless response.
